DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-19, drawn to a dressing material and related dressing product.

Group II, claims 25-29, drawn to a method of promoting epithelial cell proliferation.

2. Claims 20-24 are noted as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically, these claims are "use" claims and could be drawn to a process or to a product. Claims 20-24 have not been placed in a group since it is unclear whether they are drawn to a method of using the inorganic silicon or calcium-containing compound or to the compound itself. Should applicant amend these claims such that they are drawn to a method of using the dressing material of Group I in a process *other* than the method of Group II, they will be placed in a separate Group. Amendment of these claims in other ways is also proper and, depending on the amendment, may result in further restriction of these claims into other groups. Appropriate correction of this claim is required.

3. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or

Art Unit: 4161

corresponding special technical features for the following reasons: the common technical feature among the inventions is the dressing material, which is anticipated by Topolkaraev *et al.* (U.S. Patent No. 6,268,048; Issued Jul. 31, 2001; cited as reference AH on the IDS dated Oct. 7, 2005). Specifically, Topolkaraev *et al.* reads on the dressing material (Group I) of the instant application. For example, Topolkaraev *et al.* teach compositions useful as wound dressings (column 3, lines 64-65) comprising inorganic silicon (i.e. layered silicates) (abstract; column 7, line 50; column 4, line 53). The compositions of Topolkaraev *et al.* comprise microparticles that are less than 50 microns, preferably less than 10 microns (column 8, lines 6-8). Thus, Topolkaraev *et al.* reads on the dressing material of Group I. Because this element cannot be considered novel, the Groups do not share a common special technical feature and are subject to restriction.

4. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

5. In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the

requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
